

Clinic Application Portal Feature and Login Report

Portal-wise features, implementation locations, live deployment notes, and production login accounts

Item	Value
Report date	16 June 2026 (Asia/Karachi)
Current live domain requested	https://restaurant.nalexustechnologies.com
Clinic API base used by app	https://clinic.nalexustechnologies.com/api
Production clinic	Alpha, approved, multi_doctor, Lahore
Security note	Passwords and password hashes are intentionally not included. Use password reset/change flows for access.

Executive Summary

- The same Flutter web app has been released on restaurant.nalexustechologies.com and currently points to the clinic production API.
- The app implements role-based portals for Super Admin, Clinic Admin, Doctor, Assistant, Receptionist, Pharmacy, and Patient.
- Production currently has login accounts for Super Admin, Clinic Admin, Doctor, Receptionist, and Pharmacy. Assistant and Patient portal code exists, but no production login account exists for those roles yet.
- Clinical AI is implemented in the Doctor portal. OpenAI supports consultation drafting/summaries, and scikit-learn supports educational disease-risk demos.
- Reports and exports are available through shared report screens and role-specific report navigation.

Portal Login Accounts

These are production application accounts observed in the database. Passwords are not recoverable because the application stores password hashes only.

Portal	Name	Email / username	Role	Status	Clinic	Password status
Super Admin	Super Admin	admin@nalexustechologies.com	super_admin	active	System	Must change password = True
Super Admin	Super Admin	superadmin@clinic.com	super_admin	active	System	Password not readable from DB
Clinic Admin	Zainab Touseef	alpha@nalexus.com	clinic_admin	active	Alpha	Password not readable from DB
Doctor	Zainab	zainab@nalexus.com	doctor	active	Alpha	Password not readable from DB
Doctor	Abdul Basit	basit@nalexus.com	doctor	active	Alpha	Password not readable from DB
Receptionist	Zoha Touseed	zoha@nalexus.com	receptionist	active	Alpha	Password not readable from DB
Pharmacy	Arfa Noor	arfa@nalexus.com	pharmacy	active	Alpha	Password not readable from DB
Assistant	No production account	-	assistant	-	-	Create from doctor/clinic workflow
Patient	No production account	-	patient	-	-	Create/link patient portal account first

Portal-wise Feature Map

Portal	Role	Routes / screens	Implemented frontend	Implemented backend	Features
Public / Authentication	Unauthenticated users	/, /login, /register-clinic, /change-password	screens/auth/*.dart, routes/app_routes.dart, core/services/auth_service.dart	routes/auth_routes.py, routes/clinic_routes.py, services/auth_service.py, services/clinic_service.py	Splash, login, clinic registration, JWT session, current-user lookup, password change, profile update redirects.
Super Admin	super_admin	/super-admin, /super-admin/clinics, /super-admin/pending, /super-admin/stats, /super-admin/revenue, /super-admin/subscriptions, /reports/payments	screens/super_admin/*.dart, core/services/super_admin_service.dart	routes/super_admin_routes.py, routes/clinic_routes.py, routes/subscription_routes.py, routes/payment_routes.py, routes/report_routes.py	System dashboard, all clinics, clinic detail, pending approvals, approve/suspend/reactivate clinic, system statistics, revenue breakdown, payment report, subscription plan CRUD, assign plan to clinic.
Clinic Admin	clinic_admin	/clinic-admin, /clinic-admin/doctors, /departments, /receptionists, /pharmacy-users, /patients, /appointments, /revenue, /reports, /settings	screens/clinic_admin/*.dart, core/services/clinic_admin_service.dart	routes/clinic_admin_routes.py, doctor_routes.py, department_routes.py, receptionist_routes.py, patient_routes.py, appointment_routes.py, pharmacy_routes.py, report_routes.py, clinic_routes.py	Clinic dashboard, doctor/department/receptionist/pharmacy-user management, patient and appointment administration, clinic revenue, reports hub, clinic settings update.
Doctor	doctor	/doctor, /doctor/queue, /doctor/schedule, /doctor/disease-risk, /prescriptions, /doctor/earnings, /reports/doctor-revenue, /doctor/assistants	screens/doctor/*.dart, core/services/doctor_service.dart, core/services/clinical_ai_service.dart	routes/doctor_routes.py, prescription_routes.py, assistant_routes.py, clinical_ai_routes.py, services/clinical_ai_service.py, services/disease_risk_service.py	Doctor dashboard, appointment queue, start/complete consultation, patient profile, prescriptions, assistant management, earnings, schedule, Clinical AI consultation support, scikit-learn disease risk demos.
Assistant	assistant	/assistant, /assistant/queue	screens/assistant/*.dart, core/services/assistant_service.dart where present	routes/assistant_routes.py, services/assistant_service.py	Assistant dashboard, doctor queue support, call next patient, add vitals, upload report URL, prepare symptom draft, view patient history when permitted.
Receptionist	receptionist	/receptionist, /receptionist/patients, /receptionist/queue, /book-appointment, /billing, /receipts, /reports/appointments	screens/receptionist/*.dart, core/services/receptionist_service.dart where present	routes/receptionist_routes.py, patient_routes.py, appointment_routes.py, payment_routes.py, report_routes.py	Reception dashboard, patient registration/list/detail/history, token queue, appointment booking/reschedule/cancel, consultation billing, receipts, appointment report.
Pharmacy	pharmacy	/pharmacy, /pharmacy/inventory, /pharmacy/orders, /pharmacy/sales, /low-stock, /expiry-alerts, /pharmacy/reports, /reports/pharmacy-sales	screens/pharmacy/*.dart, core/services/pharmacy_service.dart where present	routes/pharmacy_routes.py, services/pharmacy_service.py, report_routes.py	Pharmacy dashboard, medicine inventory CRUD, low-stock/expired/expiring lists, prescription orders, sale creation, invoice screen, sales list, pharmacy reports.
Patient	patient	/patient, /patient/doctors, /patient/appointments, /patient/prescriptions, /patient/medical-records, /patient/bills	screens/patient/*.dart	patient-visible routes in doctor/prescription/payment/patient services, role guards in decorators.py	Read-only patient dashboard, doctors, appointments, prescriptions, medical records, bills. Production currently has no patient login account.
Reports Shared Module	super_admin, clinic_admin, doctor, receptionist, pharmacy	/reports/clinic-revenue, /doctor-revenue, /pharmacy-sales, /patient-visits, /appointments, /payments	screens/reports/*.dart, core/widgets/export_button.dart, core/widgets/simple_chart_placeholder.dart	routes/report_routes.py, services/report_service.py, payment_routes.py	Filtered operational/finance reports, proportional chart display, JSON/CSV/PDF export from the frontend.

AI and Disease Prediction Features

Model	Algorithm	Demo accuracy	Implemented at	Portal
Diabetes risk	LogisticRegression	88.9%	services/disease_risk_service.py; /api/clinical-ai/risk-predict/diabetes	Doctor
Heart disease risk	RandomForestClassifier	85.5%	services/disease_risk_service.py; /api/clinical-ai/risk-predict/heart_disease	Doctor
Stroke risk	DecisionTreeClassifier	79.1%	services/disease_risk_service.py; /api/clinical-ai/risk-predict/stroke	Doctor
Breast cancer screening risk	RandomForestClassifier	93.0%	services/disease_risk_service.py; /api/clinical-ai/risk-predict/breast_cancer	Doctor

- Clinical AI consultation support is implemented at frontend core/services/clinical_ai_service.dart and screens/doctor/consultation_screen.dart.
- OpenAI provider/model configuration is server-side; the frontend never receives provider API keys.
- Disease prediction demos are educational screening tools only. They are not validated diagnostic models and must not replace clinician judgment.
- Doctor-only endpoints: GET /api/clinical-ai/risk-models and POST /api/clinical-ai/risk-predict/.

Backend Route Groups

Area	Route file	Purpose
Authentication/profile	auth_routes.py	Login, current user, refresh/logout, change password, profile update
Clinic onboarding/settings	clinic_routes.py	Clinic registration, clinic detail/update, approval actions
Super admin	super_admin_routes.py	System dashboard, pending clinics, stats, revenue
Clinic admin	clinic_admin_routes.py	Clinic dashboard and admin summaries
Staff management	doctor_routes.py, receptionist_routes.py, department_routes.py	Doctor, receptionist, pharmacy user, and department operations
Clinical workflow	patient_routes.py, appointment_routes.py, prescription_routes.py, assistant_routes.py	Patients, appointments, prescriptions, assistants, vitals, reports, drafts
Finance/pharmacy	payment_routes.py, pharmacy_routes.py	Payments, receipts, inventory, sales, pharmacy orders
Reports	report_routes.py	Revenue, visits, appointment, pharmacy, payment reports
AI	clinical_ai_routes.py	OpenAI clinical assistant endpoints and scikit-learn disease risk endpoints
Audit/subscription	audit_routes.py, subscription_routes.py	Audit log listing, subscription plan CRUD, clinic assignment

Deployment Notes

Item	Current value
Web app released to	https://restaurant.nalexustechnologies.com
Restaurant Nginx root	/var/www/restaurant.nalexustechnologies.com
Previous restaurant site backup	/root/restaurant-site-backups/20260616_033006/site
Clinic backend service	clinic-backend.service, Gunicorn on 127.0.0.1:5110
Database	MySQL/Percona bound to localhost
CORS	Production API CORS currently allows clinic.nalexustechnologies.com
Important note	Because the app build uses the clinic API base, restaurant.nalexustechnologies.com may need to be added to CORS if browsers block API calls from that domain.

Portal Coverage Summary

Portal	Implemented?	Production login?	Main remaining setup
Super Admin	Yes	Yes	Use/reset password as needed
Clinic Admin	Yes	Yes	Complete live data acceptance testing
Doctor	Yes	Yes	Create real patients/appointments for clinical testing
Assistant	Yes	No	Create assistant account and assign permissions
Receptionist	Yes	Yes	Create patients/appointments/payments for testing
Pharmacy	Yes	Yes	Add inventory and prescription/sale test data
Patient	Read-only portal implemented	No	Link/create patient user accounts

Password Handling

The database stores password hashes, not plaintext passwords. This report therefore lists login usernames/emails and account status only. If a password is unknown, use the application password-change/reset/admin workflow rather than attempting to retrieve it from the database.
